Center project Information
Center project name: Humbraftl1
Center clone name: RP11-680A7
Sequencing vector: PCR products; 100% of reads
Chemistry: Dye-terminator ET-amersham; 100% of reads
Chemistry: Program: Phrap; version 0.990329
Consensus quality: 17559 bases at least 040
Consensus quality: 17555 bases at least 030
Consensus quality: 179768 bases at least 030
Consensus quality: 179768 bases at least 020
Quality coverage: 9.01x in 020 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1158

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT

```
Sequence updated (26-May-2000).

**NOTE: This is a 'working draft' sequence. It currently consists of 28 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                  Query

This is the nucleotide sequence of cDNA clone DNA40592 (ATCC 209492)
C codding for human PRO344 (UNQ303) (see AAX06481). The clone was
codding for human PRO344 (UNQ303) (see AAX06481). The clone was
closed the discontinuous formation of DNA40592
C was observed in primary lung tumours and in primary colon tumours,
C was observed in primary lung tumours and in primary colon tumours,
C cutility in cancer therapy. The invention identifies 14 genes (see
C cutility in cancer therapy. The invention identifies 14 genes (see
C cutility in cancer therapy. The invention of tumour cells. Such
c cutility in cancer therapy. The invention of tumour cells. Such
c cutility in cancer therapy. The invention of tumour cells. Such
c cutility in cancer therapy. The invention of tumour cells. Such
c cutility in cancer therapy. The invention of tumour cells. Such
c camplification is expected to be associated with overexpression of
c the gene product and to constribute to tumorigenesis. The encoded
c and/or treatment (including prevention) of certain cancers, and may
c act as predictors of the prognosis of tumour treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 1; Fig 9; 162pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antibody against proteins expressed tumor diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 1999-430385/36.

                                                                                                                                                                                                                                              The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses.
                                                                                                                                                                                                                                                                                                                                                                                                                  18-DEC-1997;

                                                                                                                                        The present sequence is the cDNA clone, designated as DNA40592-1242, encoding the human PRO344 polypeptide. It is isolated from human foetal lung tissue cDNA library, identified using probes based on a consensus sequence DNA34398, derived from secreted protein extracellular domain NC: 209422. PRO344 functions as a neoplastic cell growth inhibitor and and PRO344. This compositions as a neoplastic cell growth inhibitor and and PRO344. This composition is especially useful for treatment of human cancers such as breast, prostate, colon, lung, renal, ovarian and CNS, leukemia and melanoma.
                                                                                                                                                                                                                                                                                                                                           01-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ₽
                    The present sequence encodes a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO1265, PRO314, PRO343, PRO347, PRO357, PRO715, PRO1017, PRO1112, PRO509, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth
                                                                                                                                                                                                                    30-NOV-1999;

The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources.

                                                                                                                                                                                                                                                    망
                                                                                                                                                                                                                                                                                                                                                                                                  ASS21244-AAS21518 encode for novel human secretory and transmembrane CC PRO polypeptides. The PRO polypeptides are useful to detect other CC PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, and to detect the presence of mammalian lung, colon, propertide expression in a cell sample to that in a control sample. CC come of the 275 sequences are also useful to stimulate the release of color, polypeptide expression in a cell sample to that in a control sample. CC tumour necrosis factor-alpha (PNF-alpha) from human blood, the CC gene expression in pericyte cells, the release of proliferation or differentiation of chondrocytes, the proliferation or cc cartilage, the proliferation of inner ear utricular supporting cells or CC cartilage, the proliferation of inner ear utricular supporting cells or confocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by consecute involved in binding interactions. The polynucleotides encoding CC molecules involved in binding interactions. The polynucleotides encoding cransgenic or knock out animals and can be used in gene therapy.

The present invention describes sixty four human PRO proteins which can CC be used in the treatment of immune related diseases. The human PRO CC proteins, anti-PRO antibodies, agonists and antagonists are useful for CC treating and diagnosing immune related disorders. The disorders are CC estected from systemic lupus erythematosus, rheumatoid arthritis, luvenile chronic arthritis, spondyloarthropathies, CC systemic scierosis, idiopathic inflammatory myopathies, Sjogren's CC syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic canaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, CC anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, CC and peripheral nervous systems, hepatobiliary diseases of the central CC bowel disease, gluten-sensitive enteropathy and Whipple's disease, CC autoimmune or immune-mediated skin diseases, allergic disease, CC diseases including graft rejection and graft-versus-host-disease.

CC AAB33414 to AAB3477 represent PCR primers and hybridisation probes used CC AAB33414 to AAB3477 represent human PRO polynucleotide and protein the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1377 BP; 251 A; 423 C; 471 G; 232 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sixty four PRO polypeptides, useful in the diagnosis and tree immune related disorders, e.g. systemic lupus erythematosis, arthritis, osteoarthritis, thyroiditis and diabetes mellitus

CC protein zsig39 (AAW97984). Claimed polynucleotides comprise CC nucleotides 243-962, 252-962, 285-485, 285-485, 285-485, 285-485, 285-485, 285-485, 285-485, 285-485, 285-486, 285-481, 285-491, 491-926 of this isolated polynucleotide. CC 285-491, 285-491, 491-926 of this isolated polynucleotide. CC EST database for secretory signal sequences characterised by an CC 13 amino acids and a cleavage site. A single EST sequence was CC 13 amino acids and the novel polypeptide encoded by the full-length CC discovered, and the novel polypeptide encoded by the full-length CC adipocyte complement related protein Acr930 and adipocyte secreted CC protein appll. A full-length clone was obtained from a lung tissue vectors, cultured cells and a method of producing zsig39 polypeptide care claimed, as well as probes and primers (useful in diagnostic CC entabolism by administering a zsig39 polypeptide. The zsig39 polypeptide cc polypeptide may also be used in organ preservation, for cryopreservation, for surgical pretreatment to prevent injury due cc promoting lysis or phagocytosis of infectious agents.

The present invention provides the protein and coding sequences of human and murine secreted or transmembrane proteins TANGO 253, TANGO 281 and INTERCEPT 258. These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.
                                                                                                                                                                                                                                                                                                                                   New nucleic acids for treating diseases and disorders, e.g. atherosclerosis, infection, autoimmune diseases, obesity, ear disorders, brain disorders, tumors, diabetes, arthritis, multisclerosis and asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                 19-JUN-2000; 2000WO-US16883.

                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences human and murine secreted or transmembrane proteins TANGO 253, 1 TANGO 281 and INTERCEPT 258. These are useful in the treatment coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.
                                                                                                                                                                                                                                                                                                                       Sequence 1338 BP;

The present invention provides the protein and coding sequences of th human and murine secreted or transmembrane proteins TANGO 253, TANGO TANGO 281 and INTERCEPT 258. These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acids for treating diseases and disorders; e.g. atherosclerosis, infection, autoimmune diseases, obesity, ear disorders, brain disorders, tumors, diabetes, arthritis, multiple sclerosis and asthma -

The invention relates to an isolated human secreted protein (SECP)
CC polypeptide from 63 fully defined protein sequences given in the
CC specification. The polypeptide is useful for the diagnosing/treating of a
CC disease with decreased/overexpression of SECP. Examples of disorders
CC disorder e.g. arterlosclerosis, cancers; autoimmune/inflammatory
CC disorder, AIDS, allergies, anaemia, asthma; cardiovascular disease e.g.
CC congestive heart failure, ischaemic heart disease; developmental disorder e.g.
CC e.g. renal tubular acidosis, hypothyroidism; neurological disorder e.g.
CC Alzheimer's disease, dementia, parkinson's disease, epilepsy or stroke.
CC the proteome of a tissue or a cell type. The polynucleotide is useful for analysing
CC creating knockin humanised animals (pigs) or transgenic animals (mice or and further for generating hybridisation probes useful in mapping the
CC crastily cocurring genomic sequence. This polynucleotide sequence
CC raturally occurring genomic sequence. This polynucleotide sequence
                                                                                                                                                                                                               Query Match
